

# Chasing the dragon

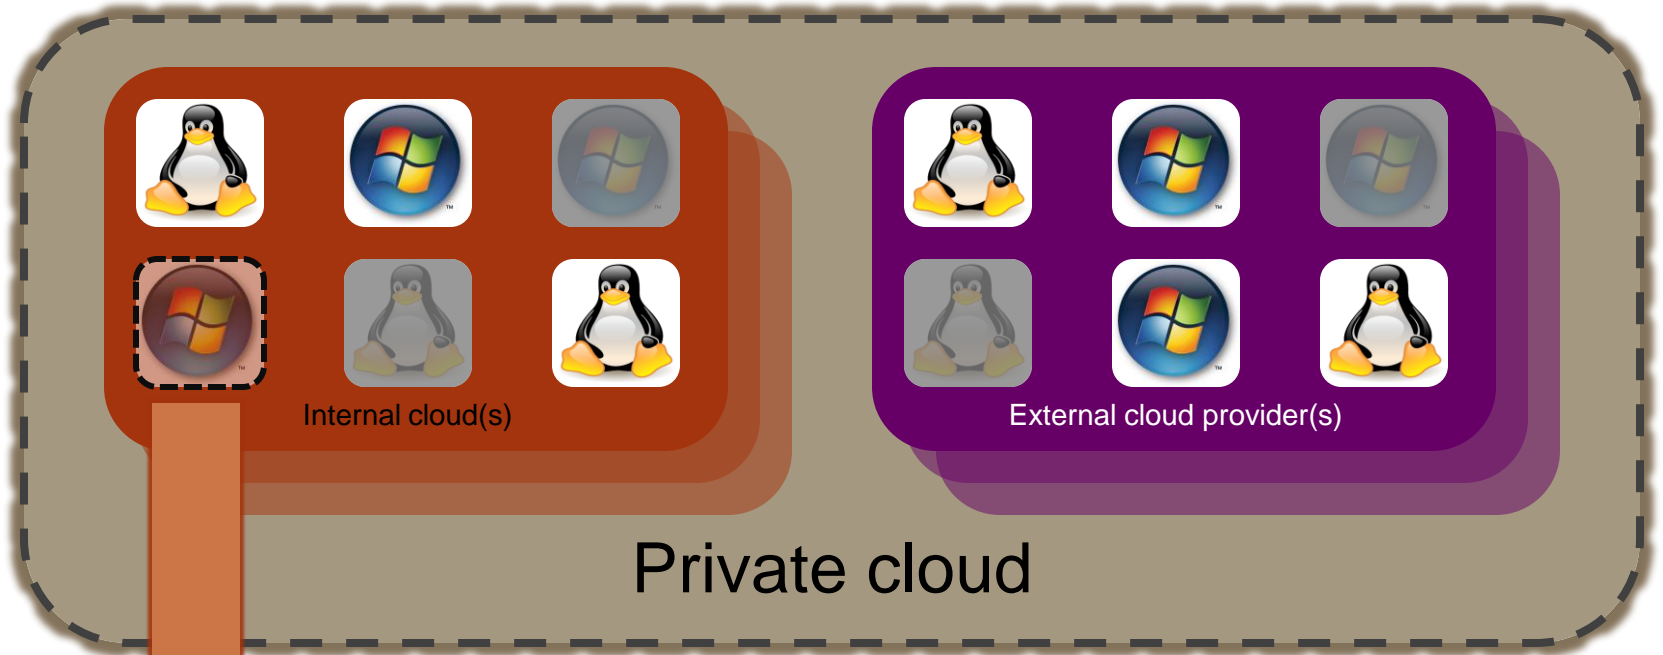

## Changing security requirements

Simon Perry

Principal Associate Analyst – Sustainability

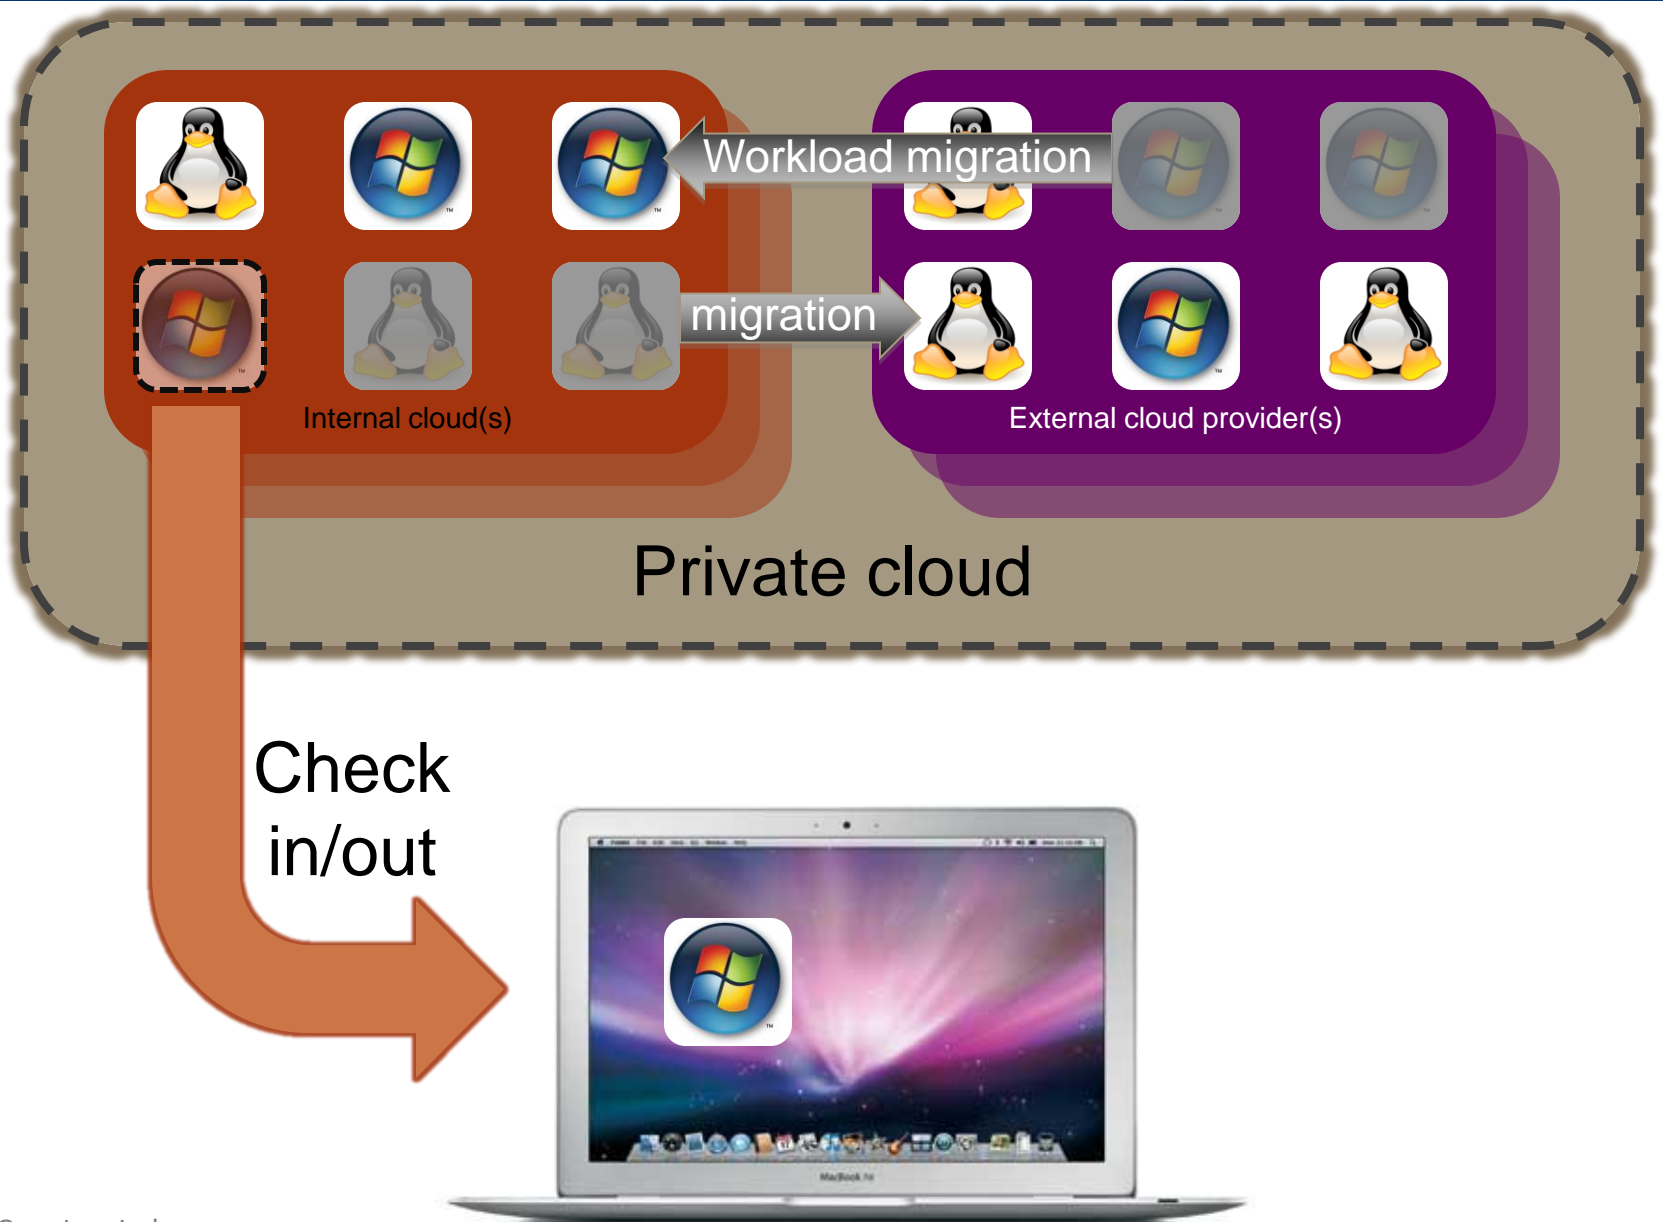

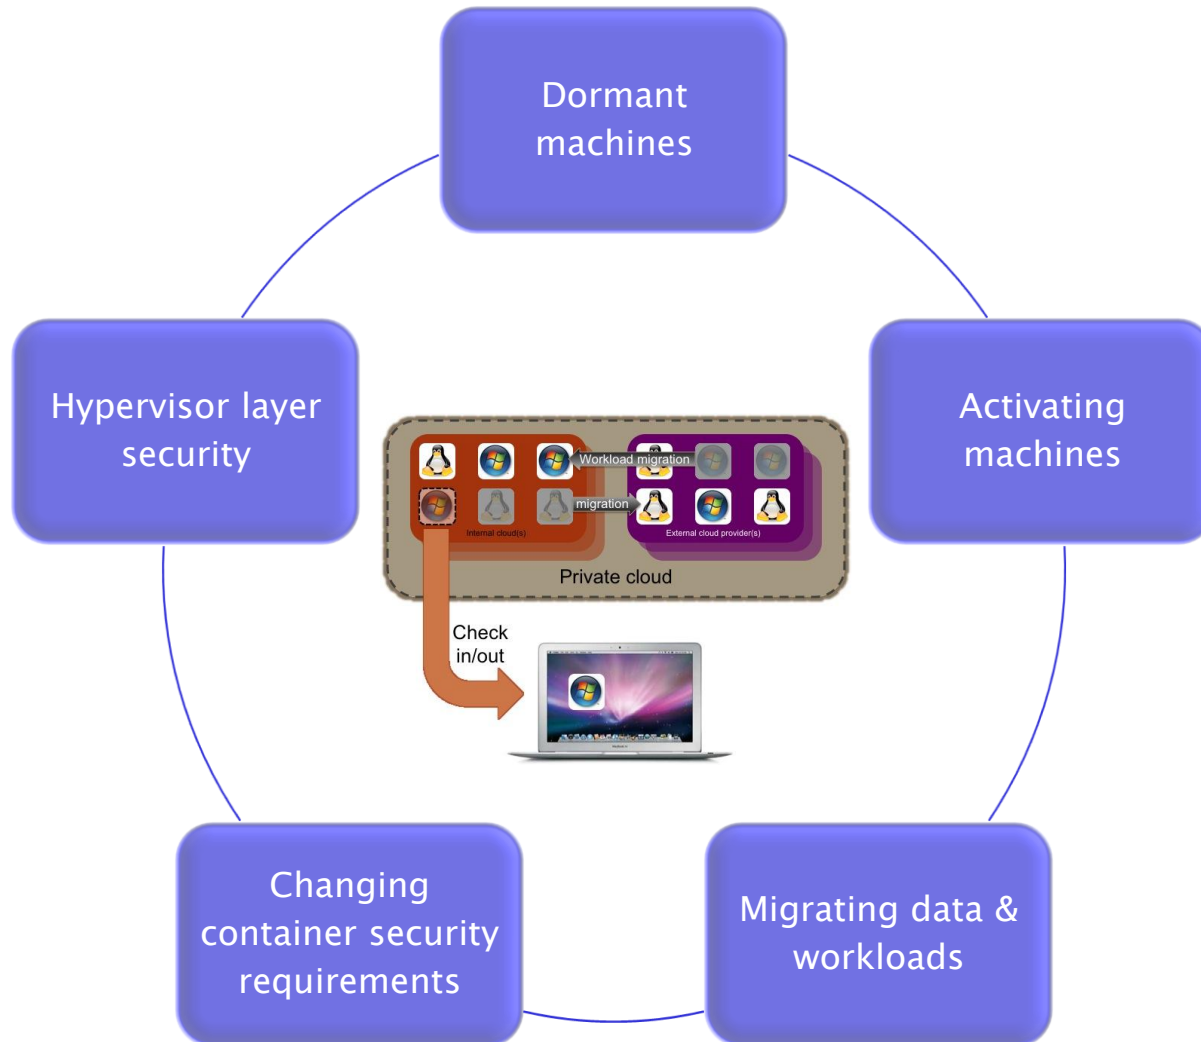

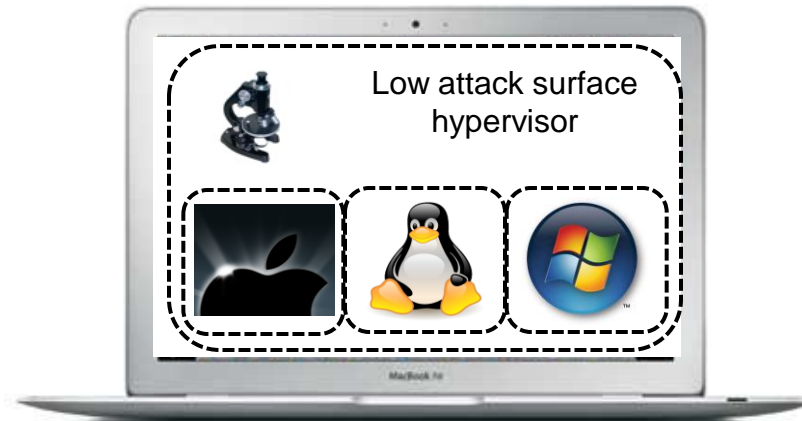

Check  
in/out

- Understand that cloud computing and virtualisation are complementary yet different technologies
- Existing malware and DLP technologies are only somewhat useful
- Security software must not just coexistence with virtualised environments, they need to *exploit* the new model
- Information governance is a critical issue for cloud computing models

- **Managing 21st Century Networks** (Quocirca, January 2007)
